Developing your ideas

Basic steps:

- Work together with ICC to identify issues and generate ideas about what you want to do (contact the team using the details provided)
- Use the Resource sheets for further ideas about what you can do
- Decide what you will take action on and who needs to be involved
- Put your plan into action and don't forget to record what you've done!
- Show others what you have achieved at a local event
- Take part in a regional or national show-case event

Some other Eco project ideas:

Air Quality and Pollution

- Find out about (and ask to visit) local Pollution Monitoring Centres eg next to major roads and devise your own awareness raising project on air quality

Changes to your local environment

- Record (photos, interviews etc) and tell others about the changes to schools being re-built and the impact on the environment
- Carry out a photo/ video project on the changes in your local environment- new buildings, refurbishments, roads and present this to local audiences and internationally via web link
- Research specific areas such as traffic at key crossroads, new roads, or new bus-ways and the changes they are bringing

Recycling

- Visit Materials Recycling Facilities locally and then plan an awareness raising campaign about recycling for people at your club, school or in your area
- Find out about the amount of recycling in your area (photo-research) and see if the council can provide more recycling bins for what's needed.

Sustainable Solutions

- Liaise with a local business involved in sustainable solutions and develop your own energy saving devices or techniques
