

IDEAS ZONE **One thing we could do in our school ...**

King's Oak Academy

1. An idea that was said in our workshop was the behaviour of people in schools where they do not turn off computers or remember to do things that could help affect the amount of electricity and money used around the school
2. Recycle more: You can recycle old CDs to make school equipment. This reduces consumption.
3. We could try to change roofing to use solar tiles or panels to lower the energy consumption.
4. Have recycling bins in schools for old belongings such as clothes to reduce carbon emissions in the transportation of new clothes, and to recycle old clothes that people would otherwise throw away.
5. Turn off the lights, the computers and shut the windows.
6. Our idea is to focus on reducing energy consumption by thinking about how we get to school and things we do everyday that takes energy
7. I could get recycling bins in school.
8. I liked the way we talked about how we could reduce emissions if we stopped wasting water as CO₂ is made from water filtration.

The Castle School

1. Be mindful of what you use and what you waste – it can often be used in another way if you think about it
2. Turning electricity or forms of electronics off and try and find other forms of making or storing energy in school
3. TURN OFF THE LIGHTS!
4. We can improve by making teachers cycle or catch a bus to school instead of going by car.

The Ridings Federation Winterbourne International Academy (TRFWIA)

1. Use pencils made out of CDs, get a recycling bin for clothes, car-sharing and **shut down computer at end of the day.**
2. Energy Reduction Programme.
3. Everything consumed by each member of the public required fuel and energy to get where it was. There should be a campaign to get people to think about each aspect of the day and cut down of the most wasteful of energy processes.
4. Building more eco-friendly habits for everyday life.
5. Schools should make more of an effort to reduce energy usage (TVs!)
6. Work together to change attitudes and habits to make small changes that will add up to make a big difference.
7. Clothes recycling; public transport / cycling; fairtrade / less waste; more energy efficient; pressure businesses to waste less/ donate; reduce emissions by any means.
8. Behaviour change (windows closed / computers off).
9. Reduce consumption within schools eg computers / heating.
